

PETRONAS — Agentic 3-Year Outlook (Q4 2026 → 2029)

Deep-research prediction brief · prepared by FI-008 (warga-aaa) for F13 Sovereign · 5 October 2026 · All stakes planted in CHRON with calibration tracking · **SAFE_TO_STUDY** — analytical input, not decision authority (WEALTH organ doctrine)

1 · Ringkasan Eksekutif (BM)

PETRONAS **tidak dalam krisis** — naratif media Sep-Oct 2025 ("dividen terendah 9 tahun, pemotongan 5,000 pekerja, CEO memberi amaran syarikat mungkin gagal tanpa tindakan") telah terbalik oleh realiti terukur: H1 2026 untung selepas cukai **RM27.2 bilion (+4%)**, volum LNG eksport **+17%**, dan Brent perang **USD101.57** menjadikan senario dividen kerajaan **RM45-48 bilion** untuk FY2027 — lebih dua kali ganda anggaran lama. Struktur sebenar 3 tahun: (1) premium perang Hormuz menyokong upstream tetapi membengkakkan bil subsidi Malaysia (RM40-50b) — tekanan politik akan menuntut dividen lebih tinggi SEMASA PETRONAS menjana capex terbesar dekadnya (LNG Canada Ph2 RM94.7b, Suriname, IDD Indonesia); (2) pertikaian Sarawak-Petros kini di Mahkamah Persekutuan — risiko struktur domestik No. 1 pada rantai nilai gas; (3) penaiktarafan tenaga kerja selesai dalam regime untung terkuat sejak 2022 — setup margin, bukan kemerosotan. Ketidakpastian dominan: laluan penyelesaian Hormuz (50/50 menjelang akhir 2027). Media arus perdana mengekstrapolasi trend harga 6 bulan; rejim perang memecahkan ekstrapolasi itu — itulah lubang analisis yang brief ini isi.

2 · Measured Baseline (5 Oct 2026, LIVE where marked)

Indicator	Value	Source / Class
Brent crude (spot)	USD 101.57 · regime UPTREND (conf 0.95), EMA200 98.67	WEALTH organ LIVE feed · war premium est. +USD 25-35 vs pre-war ~70
USD/MYR · DXY · VIX · US10Y	4.09 · 102.3 · 15.85 · 5.31%	WEALTH macro snapshot — note: equity vol CALM despite war
Group H1 2026 PAT	RM 27.2b (+4% YoY); LNG export volumes +17%	Results coverage, Sep 2026 (reported)
Dividend to govt FY2026	RM 20b confirmed (Feb 2026) — set when Brent ~65-70; scenario now RM48b if Brent holds	The Star 2026-02-27; The Edge 2026-10-02
Fuel subsidy bill	RM 40-50b at war-Brent — exceeds even the high dividend case	KLSE Screener / Edge Budget 2027 coverage
LNG Canada Phase 2	FID TAKEN 29-30 Sep 2026 — C\$33b (~RM94.7b), capacity → 28 MTPA; PETRONAS JV partner	The Star 2026-09-30; lngcanada.ca
Sensitivity (MOF est.)	Every +USD 10/bbl ⇒ +RM 3-4b PETRONAS dividend	The Star 2026-10-05
Workforce	~5,000 rightsizing (announced Jun 2025), rounds Mar + Aug 2026; hiring freeze lifts Dec 2026	Reuters 2025-06-05; Activity Outlook
Sarawak / Petros	PETRONAS motion at Federal Court (filed 12 Jan 2026); High Court ruling (28 Feb 2026) on banking-law grounds only; constitutional question pending; commercial talks slipped past "early 2026"	Bloomberg/EnergyConnects 2026-01; fulcrum.sg 2026-04
Pipeline (sanctioned)	LNG Canada Ph2; Suriname Block 52 (2nd FID + FLNG targeted 2026); Indonesia IDD w/ Eni (~US\$15b, FID Mar 2026); domestic 2026-2028: hold ~2 MMboe/d (Belud, Sepat, Kurma Manis EOR)	Activity Outlook 2026-2028; project releases

3 · Media vs Measured — Four Critical Checks

Check 1 — "Dividend collapse / lowest in 9 years" (Oct 2025 narrative)

Media extrapolated the 2025 soft-price regime into fiscal policy. Measured reality: that RM20b figure was priced at Brent ~USD 65-70. At war-Brent 100+, MOF's own sensitivity (+RM3-4b per +USD10) puts FY2027 at RM45-48b. The "collapse" narrative died within 11 months. **Lesson: media extrapolates 6-month price trends; regime breaks (war) invalidate the extrapolation.**

Check 2 — "Layoffs = decline"

Social media still recirculates job-cut stories with wrong dates (some claim 2023). Measured: the ~10% rightsizing was announced Jun 2025, executed Mar-Aug 2026 — landing into the strongest earnings regime since 2022 (H1 PAT +4%, LNG +17%). Cost-out into record margin is margin-expansion setup, not distress. Watch the hiring-freeze lift (Dec 2026) as the real inflection signal.

Check 3 — "Sarawak dispute = legal technicality"

Media covers episodes (filings, quotes). The structure underneath: Sarawak is securing aggregator economics on ALL new domestic gas via institutional settlement, not displacement of PETRONAS. The May 2025 joint declaration did not hold; the constitutional question is now at the Federal Court. Outcomes span co-existence settlement (base) → resource-access restructuring (bear). This is the single largest DOMESTIC structural variable in the 3-year window — worth more attention than any OPEC headline.

Check 4 — "War is bad for PETRONAS"

Nuanced: PETRONAS is structurally net-long (upstream windfall) — the war's fiscal channel literally routes Gulf rent through PETRONAS to Putrajaya (RM48b dividend scenario funding a RM50b subsidy bill). Real war costs sit elsewhere: Middle East import costs for refining, war-risk insurance, downstream margin squeeze, and tail risk on shipping lanes. Media reports "oil price up = good for oil companies"; the integrated picture is rent transfer, not simple windfall.

4 · Scenario Map 2027-2029 (probabilities sum to 1.00)

Path	p	Key assumptions	PETRONAS face
BEST — Mediated peace	0.25	Durable Hormuz reopening by mid-2027; Brent mean-reverts USD 80-90 (elevated by lost capacity + insurance premium); RON95 reform lands; Petros settlement codified	Dividend RM38-44b; PAT normalises RM45-55b; LNGC Ph2 on schedule; capex intact; sentiment re-rating
BASE — Grinding conflict → late-2027 de-escalation	0.50	Strait impaired through 2027, partial corridors; Brent USD 90-105; subsidy bill RM45-50b forces faster reform; dividend squeezed UP politically	Dividend RM40-48b; PAT ≥ RM50b FY2026 then flattening; upstream windfall vs downstream drag; rightsizing discipline holds
WORST — Escalation / closure deepens	0.25	Direct US-Iran escalation, Gulf fully closed into 2028; Brent > USD 120 then demand destruction; global recession; MYR pressure	Windfall 2027 then crash 2028; forced over-dividend into downturn (capital-allocation damage); Petros dispute hardens; LNGC exposed to shipping risk

CIVX seed (malaysia_fiscal_2027_2040) resilience scores — BEST: fiscal 0.8 / intergenerational 0.8 · BASE: 0.5 / 0.4 · WORST: 0.2 / 0.1. SAFE_TO_STUDY, interpretive only.

5 · Prediction Stakes (planted in CHRON, auto-verified, Brier-scored)

#	Claim	p	Verify by	Falsifier
1	PETRONAS FY2027 dividend to federal government ≥ RM40b	0.62	2027-10-09 (Budget 2028)	announced < RM40b
2	Strait of Hormuz durable reopening (≥60% pre-war transits, ≥60 days) by 31 Dec 2027	0.50	2027-12-31	no such window
3	LNG Canada Phase 2 first cargo by 31 Dec 2029	0.70	2029-12-31	no Ph2 cargo shipped
4	PETRONAS-Petros commercial settlement signed by 31 Dec 2027	0.58	2027-12-31	no signed settlement
5	Group FY2026 profit after tax ≥ RM50b	0.66	2027-02-27 (results)	FY2026 PAT < RM50b
6	RON95 rationalisation implemented nationwide by 30 Jun 2027	0.66	2027-06-30	flat subsidised RON95 still in effect
7	Malaysia upstream production averages ≥1.8 MMboe/d in 2028	0.72	2028-12-31	2028 avg < 1.8 MMboe/d

Pre-existing related stake: "FY2027 dividend ≥ RM30b" (p=0.60) verifies 2026-10-09 Budget day — stake 1 above sharpens it. Calibration context: institution accuracy 72.6% (n=14, INSUFFICIENT — widen intervals accordingly). No stake exceeds p=0.72: war-regime uncertainty is real.

6 · What Would Change This Outlook (watchlist)

- 1. **Hormuz transits** (IMF PortWatch): sustained climb above ~50/day = BEST-path trigger; strike on a major terminal = WORST trigger.
- 2. **Federal Court calendar** for the PETRONAS-Petros constitutional question; any Sarawak ministerial language shift from "settlement" to "rights".
- 3. **Budget day line items (9 Oct 2026)**: dividend assumption embedded in FY2027 revenue; RON95 reform language — first hard test of stakes 1 & 6.
- 4. **War-risk insurance premia** on Gulf/Red Sea lanes — the quiet tell for shipping-cost pass-through into downstream margins.
- 5. **PCHEM margins** (Q1 2026 loss RM754m → Q2 profit RM445m): China demand stabilisation is the downstream swing factor.
- 6. **Qatar/North America LNG wave 2027-2029**: supply wave compresses LNG margins into PETRONAS's own capacity additions — watch long-term contract sigs vs spot.
